As part of the Hospital Hygiene Program, supported by APEFE in Belgium, BASR organized a 3 day training course on “Wound Care Management”, in partnership with Belgium Condercet School. The training targeted BASR’s nursing staff along with several foreign volunteers from France. It aims at training the nurses on the exact method of wounds assessment and observation, as well as developing nurses’ capacity on re-evaluation of patients’ care.

The training encompassed several practical sessions on the appropriate ways of maintaining the highest level of hygiene while treating injuries, in addition to several lectures on such topics as the measures of self-hygiene in time of illness and nurses’ duties towards a daily hygiene of patients residing in hospital wards, particularly patients’ personal hygiene and the hygiene of the surrounding environment.
Training Course on Wound Care Management to Develop BASR’s Nurses’ Skills on Hospital Hygiene
